

# nuNAV

## 3D Facial Image Analysis

- Deep Analysis:** High-res with AI reveals invisible metrics including texture, pigmentation, and vascularity that can be easily shared with the patient
- 3D Precision:** Captures full-face scans to analyze 17+ indicators and determine "True Age."
- Future Simulation:** Visualizes future skin conditions to drive preventative planning with programmable treatment options to upsell additional services
- Clinic Friendly Design:** No ongoing subscription fees and dedicated hardware included
