CASE STUDY DETAILS

Age: 54 **Gender:** Male **Race:** White

Treatment: Microneedling with Potenza RF device

Exosomes: Labossen Bio-Xome Skin Serum

Area of Treatment: Two 4"x4" sections on center of back

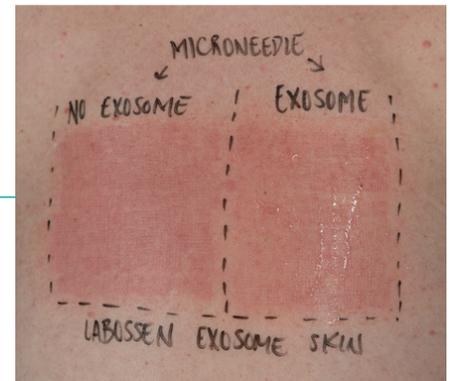

EXPERIMENTAL

In a controlled comparison, both areas underwent microneedling by a licensed professional. One side received microneedling alone, while the other was treated with topical exosomes. Over 1 hour, time-lapse images were taken in 10 minute intervals showing the exosome-treated area had faster reduction in redness and inflammation.

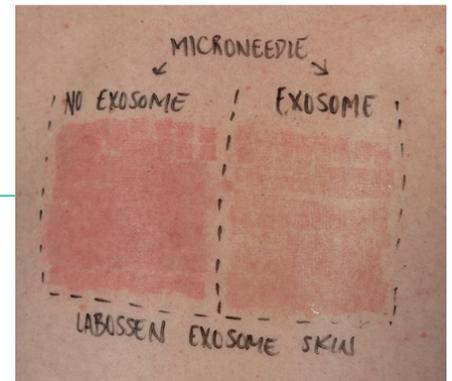

SUMMARY

In a side-by-side test, the left side of the skin was treated with microneedling alone and the right side received microneedling with exosomes applied during treatment. In just 60 minutes, the exosome-treated side showed **5X+** faster recovery and reduced redness.
